## **DETAILED ACTION**

### ***Response to Amendment***

Claim 9, previously indicated as including allowable subject matter and amended by Applicant accordingly has been rejected as a result of a newly discovered reference. The Examiner regrets any inconvenience to Applicant or Applicant's representative(s).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 9 is rejected under 35 U.S.C. 102(e) as being anticipated by Hodorek (U.S. 7,235,080). Hodorek teaches an apparatus for the preparation of a femoral condyle for the insertion of monocondylar knee implants, comprising: a spreading device for the setting of a desired spacing between a femoral condyle and an oppositely disposed tibia plateau and comprising at least one functional attachment 8 coupleable in a vertically adjustable manner with the spreading device, wherein the spreading device includes a spreading section 16/30 which can be introduced between the femoral condyle and the tibia plateau and which extends substantially perpendicular to the spreading direction,

Art Unit: 3733

and handling section 10 for the spreading section which includes an angle  $\alpha > 90^\circ$  with the spreading section, wherein the functional attachment 8 supports a cutting and/or drilling jig and is adjustable at least vertically relative to the spreading device when the desired spacing is set at the handling section 8 by means of the spreading device, wherein the spreading device includes a lower part 16 supportable at the tibia plateau, an upper part 30 adjustably guided at the lower part and an actuation member 46 adjustably held at the lower part which cooperates with the lower part and the upper part such that a setting movement actuation member can be translated into a spreading movement of the upper part away from the lower part, and wherein the actuation member is made as an adjustable screw 46.

### ***Allowable Subject Matter***

Claims 3-8 and 10-23 are allowed.
